

CPESearch.com™

Quick and Accurate Matching of Vulnerabilities (CVEs) to Affected Software Products

Common Vulnerability and Exposures (CVE) reports from NIST provide a great deal of detail about software vulnerabilities, but they rarely offer enough information to directly identify the actual software products and versions that are impacted by a particular vulnerability.

Introducing CPESearch.com™

Eracent's **no-cost** CPESearch.com solution addresses the challenge of quickly and accurately linking software products (CPEs) to known cybersecurity vulnerabilities (CVEs). This reduces manual research and improves vulnerability detection efficiency.

CPESearch.com utilizes authoritative data from NIST's Common Platform Enumeration (CPE™) Dictionary, making it 100% trustworthy.

CPESearch.com provides cybersecurity professionals with:

- Comprehensive mapping of CPEs to CVEs
- Quick vulnerability search and filtering capabilities
- A continuously updated cybersecurity vulnerability database.

Benefits of CPESearch.com

Every cyber program can benefit from CPESearch.com through:

- Rapid identification and assessment of software vulnerabilities
- Streamlined vulnerability management processes.
- Improved risk analysis accuracy and minimized response times.

Why Use CPESearch.com?

CPESearch.com uniquely combines extensive CPE-to-CVE mapping capabilities with a highly intuitive search experience, enabling cybersecurity teams to quickly pinpoint vulnerabilities that are relevant specifically to their software environment.

Who Can Benefit from Using CPESearch.com?

The data, mapping and process improvements offered by CPESearch.com will be useful to anyone who is responsible for software vulnerability management including:

- Cybersecurity Professionals
- Vulnerability Analysts
- Security Operations Teams
- IT Asset Managers.

To utilize this functionality, simply navigate to <https://cpesearch.com>.
